

SAMPLE 1: Green Solar Technologies, SolarWorld USA, SolarReviews

Green Solar Technologies Ranked #1 Solar Installer in CA

Los Angeles, CA (PRWEB) October 02, 2017 – Green Solar Technologies (GST) may be at the number one spot now, but they didn't start there. They have been working tirelessly all year to stand out among CA installers by providing full-service solar panel installations and financing options for every type of home and business owner nationwide. One thing that separates them from other installers is that their primary product manufacturer is SolarWorld USA, America's most successful and longest-lasting solar panel manufacturer established in 1975.

GST begins the process for people looking to go solar with a start-up solar consultation. During this time, their product knowledge expert Solar Consultants educate the customer about their company, how solar power works, and answer all of their questions. It is at this point they explain of the benefits and options of going green from beginning to end.

Next, the Solar Consultants evaluate the energy demand of their customer and provide a free quote for a solar power generation system (SPGS) design tailored to meet their annual energy needs.

From there, the customer is given a proposal from a Senior Solar Advisor for a system that would eliminate their energy dependency on their utility company. Different financing options are offered including cash and various fixed-payment loan terms. Once those terms are decided upon, GST will arrange the installation, taking great care in the layout of the home or business, as well as the personal concerns of the customer. After the installation, net metering is set up so that the new solar home or business owner can monitor their energy production in real time.

That is all there is to it! The customer has gone solar with Green Solar Technologies and can then begin saving for decades to come. A lot of GST's business comes from referrals of previous customers who have had the pleasurable experience of trading their permanently escalating utility bill for a temporary, low, fixed payment.

So it is no wonder that GST would be California's highest ranking solar installer. They really take care of their customer from that first phone call, all the way up to the installation. And this achievement holds even greater weight by the fact that California is leading the nation with over 4.7 million homes powered by solar and over 100,000 employed in the solar industry, several times more than any other state. But perhaps another reason customers have ranked GST so high on SolarReviews is because of their remarkable

accessibility post-installation. The business-customer relationship remains for the duration of its 25 year warranties. If a customer is having trouble with a panel or with monitoring their energy production, GST is there to make sure the customer gets the most out of his or her investment.

Ged Friedman, Marketing Management for GST says, "We are very much involved with our customers for the entire solar process. And that includes even after their system is installed. We understand our reputation and success moving forward depend not only on educating the customer and providing them the best renewable energy alternatives, but also in keeping them happy for many years into the future. This means listening to their concerns and doing all that we can to handle them as soon as possible."

Now with certified "Pre-Screened Solar Pro" status, GST has also achieved a Top 10 ranking among CA installers of All-Time and a Top 35 ranking for Most Reviewed Installers of All-Time with a 4.8+ star customer rating.

Ged continues, "The success we have had as a company thus far is merely foreshadowing what is possible in the future. The solar industry is open wide and we are educating more people and helping positively change their lives every day."

SAMPLE 2: Green Solar Technologies

Green Solar Technologies - Nevada Brings Net-Metering To Solar Homes

Las Vegas, NV (PRWEB) January 15, 2018 – The decision arrived in June to restore conditions for solar-powered homes after utility regulators voted to nullify net-metering credits and increase fees on all residential solar customers. Now, after hundreds of solar worker layoffs and several installers pulling out of the state, the prospects for homeowners to go solar are bright again. Over the course of the next year, the solar market in Nevada is expected to increase exponentially as homeowners in search of renewable energy alternatives become aware of this victory for solar power prospects.

With the signing of Assembly Bill 405 by Governor Brian Sandoval, customers of solar not only have net-metering restored to their solar energy systems, but qualify for Renewable Energy Credits (RECs) at 95% of the standard retail rate of electricity for all overgeneration. This makes having a system which provides more than 100% coverage for annual kilowatt usage particularly advantageous in that there is no threat of loss for producing energy that goes unused. Customers can simply carry their RECs over and receive credit against future costs for months they may underproduce.

The turnaround of environment in the Nevada solar market has reinvigorated solar installers as much as homeowners. One such solar installer is Green Solar Technologies (GST)—a national company based out of Los Angeles, California. GST has been in the business of solar for many years and is excited about the news of net-metering in Nevada.

“We have been waiting a long time to see this happen,” says Ged Friedman, Marketing Management for GST. “Homeowners of Nevada have been held back for almost two years waiting for the climate of solar to change. Now that they have net-metering reinstated with overgeneration incentives, we want to be first to celebrate this victory for solar and the Nevada homeowners that are ready to look into more sustainable, affordable, and self-sufficient forms of energy.”

Advocates of solar across the nation are hoping that the change of Nevada utility law will stand as both an example and an inspiration for other states still gridlocked with laws prohibiting net-metering.

SAMPLE 3: Conmet eMobility, Carrier Transicold, Penske Logistics

The First Fleet to Invest in a Fully Battery-Powered Electric Trailer

Vancouver, WA, April. 20, 2023 – Penske Logistics has teamed up with sustainable transportation technology pioneers ConMet eMobility and Carrier Transicold, making strides for an eco-friendly future in the commercial vehicle industry, by purchasing and operating two of their trailers equipped with the all new Vector eCool system. Penske Logistics is the first of an expected large number of fleets to invest into this cutting edge technology.

The Vector eCool system is a regenerating electrical power source which pairs with an electric TRU with a goal of proving zero-emission refrigerated transport of cold cargo. It is the latest in the contributions of ConMet eMobility and Carrier Transicold toward a sustainable future and was designed to power refrigeration trailers for a variety of commutes. Since adopting this technology in February 2023, Penske Logistics has completed more than 50 trips with a fully battery-electric tractor, of which 39 consecutively were 100% electric, and produced no direct tractor or TRU emissions. They have covered a span of 8,000 miles and over 1,000 electric TRU hours.

The Vector eCool system functions as an electricity source to power the trailers' multi-temp refrigeration units. When Conmet eMobility's eHub is paired with Carrier Transicold's unique electric TRU, they provide the trailers with the capability to maintain custom temperatures for food storage, accommodating dry, chilled, and frozen food items set to -20 degrees, and assuring safe conditions ideal for preservation throughout the duration of the trip. Based on the initial route performance of Penske's trailers equipped with the Vector eCool system, ConMet eMobility projects to reduce annual emissions of foodservice delivery to 459,000 g/NOx, 40,000+ lbs of CO2, and 16,000 g/PM.

"We strive to be leaders in the electric technology transport space," said Alice DeBiaso, Vice President and General Manager, Truck Trailer Americas and Digital Solutions. "We believe as more companies are introduced to the benefits of the Vector eCool system, we can revolutionize standards for sustainability set for foodservice delivery moving forward."

By investing into this sustainable technology partnership, Penske Logistics also receives the added benefits of ConMet eMobility's helpful service provisions post-purchase. This includes troubleshooting hardware and software, assisting with identifying the most economical routes and resting points, appointing engineers to address rising issues quickly, and even

shadowing first drives to assure a smooth and dilemma-free driving experience.

“Although we are very confident with the efficacy of the Vector eCool system, we understand that drivers new to this technology might need assistance,” said Marc Trahand, Vice President and General Manager of ConMet eMobility. “We are committed to not only providing them the tools they need to complete every trip, but the hands-on assistance to educate and empower them throughout their familiarization process.”

ConMet eMobility and Carrier Transicold are expanding their trailer delivery schedule with other large fleets throughout the year. About ConMet

ConMet, a division of Amsted Industries, is a leading global supplier of wheel hubs, aluminum castings, and structural plastics to original equipment manufacturers and aftermarket channels in the commercial vehicle industry. Founded in 1964, ConMet innovation has been critical in designing, engineering, and manufacturing revolutionary technologies for trucks and trailers. Today, ConMet products are standard equipment on most heavy-duty vehicles in North America and have a growing footprint worldwide.

ConMet eMobility was established in 2020 to address the needs and challenges of clean energy technology. The growing team has years of experience in electrical engineering, system controls, battery science, and more. Together with the unmatched wheel end expertise and support of ConMet, ConMet eMobility is enabling the development of zero-emission commercial vehicles, capturing, and regenerating the kinetic energy that would otherwise go wasted. For more information, visit www.conmet.com/emobility

About Carrier

As the leading global provider of healthy, safe, sustainable and intelligent building and cold chain solutions, Carrier Global Corporation is committed to making the world safer, sustainable and more comfortable for generations to come. From the beginning, we’ve led in inventing new technologies and entirely new industries. Today, we continue to lead because we have a world-class, diverse workforce that puts the customer at the center of everything we do. For more information, visit www.corporate.carrier.com or follow us on social media at @Carrier.

About Penske Logistics

Penske Logistics is a Penske Transportation Solutions company with

operations in North America, South America, Europe and Asia. Penske Logistics provides supply chain management and logistics services to leading companies around the world. Penske Logistics delivers value through its design, planning and execution in transportation, warehousing and freight management. Visit www.penskelogistics.com to learn more.

SAMPLE 4: Regenics

Regenics Committed to Helping People Become “Fit for Modern Times” with Advanced Health Treatment Solutions

Regenics is a leading health company specializing in custom wellness, fitness, aesthetic, and sports medicine solutions and products.

Los Angeles, CA, October. 1, 2024 – As a premier tech-focused health & wellness company, Regenics has been bridging the gap in modern healthcare for years. Harnessing sophisticated technologies and cutting-edge products to push the boundaries of health science, Regenics was founded with a simple vision—to make high-quality, dependable healthcare accessible to everyone.

From accelerated natural weight loss solutions to all-encompassing BioMarker testing; from testosterone optimization and IV infusions to a broad spectrum of proprietary supplements, Regenics offers an array of unique solutions that challenge the bar of contemporary healthcare.

According to a representative from the company, Regenics stands to revolutionize wellness and health optimization with a holistic approach, stating the following:

“At Regenics, we’re modernizing the way you power your health with our comprehensive, state-of-the-art facility, complete with personalized BioMarker Testing, Hormone Optimization (TRT), Peptide Therapy, IV Infusions, and much more,” said Regenics’s spokesperson. “With a welcoming environment and experienced specialists, you should feel good about getting the treatment solutions you need to take your health to the next level.”

As one of the leading specialists in natural and effective weight loss, Regenics stands at the frontier of innovation in this field. The core of Regenics weight loss plans and solutions comprises of a variety of proprietary products including, but not limited to, Tirzepatide, Semaglutide, Bio Boost, Carnitine, Metformin, B12 Injections, and many others.

Moreover, the company offers in-house body composition analysis testing services. This invaluable offering helps clients ascertain the exact composition of minerals, muscle mass, fat, and body water in their system, which is one of the prerequisites to efficient medical weight loss treatments.

For physically active individuals and sports enthusiasts, Regenics offers a comprehensive blood panel, Cortisone injections, Hyaluronic Acid injections, food sensitivity testing, micronutrient testing, and numerous other solutions—all backed by the latest medical science and research.

These services are complemented by an array of special products engineered to elevate physical wellness and performance, such as Carnitine (L), and Sermorelin. In addition to its staple sports boosters, Regenics's catalog includes a variety of premium quality dietary supplements, including Gut-Ease, StressLess, Regularity Ultra, Fiber Max, K2-D3 Synergy, Immune-Q, and a barrage of other health boons.

As underscored by the firm's representative, Regenics set out to create a holistic well-rounded system meant to improve all aspects of health, offering specialized solutions to weight loss, body performance, and health at a single source:

"Instead of limited access to care, we empower you to prevent illness, optimize your health indicators, and feel your very best," the spokesperson continued. "The journey often starts with our Comprehensive Blood Panel, Micronutrient Testing, and InBody Composition Scan. The reports are exceptionally detailed, allowing us to assess the health of multiple systems and BioMakers within your body."

Natural beauty boosters and revitalizing products are at the heart of Regenics Aesthetics offering. With services ranging from Botox and microneedling to hydrafacial treatments, hair restoration, and anti-aging products, the company is catering to the ever-accelerating beauty needs of modern consumers. Whether it be testosterone replacement therapy or P-shots for men or specialized infusions and O-shots for women, Regenics is empowering clients with unique wellness solutions aimed at enhancing vitality, natural immunity, and strength.

Apart from custom health solutions and products, what separates Regenics from contemporary alternatives is a suite of follow-up services that further reinforce the efficiency of its health and wellness plans:

"Once you become a part of the exclusive Regenics family, we will work closely with you and keep your health and wellness our top priority. Having on-demand access to our facility, regular follow-ups from our providers, and interactive events will help you stay motivated and ensure you crush your goals."

The knowledgeable team at Regenics shares decades of health industry experience and has pledged to raise the boundaries of quality, efficiency, and dependability of modern medicine by continuously improving it with in-house solutions. The company continues to pursue excellence in a bid to stay ahead of the curve as it keeps revolutionizing health and wellness industry standards.

More information about Regenics is available on the company's [official website](#).
